Date : 04 March 2024

Re : **Discontinuation of Test Services – FISH Testing for DiGeorge Syndrome**

Dear Users of Laboratory Medicine,

We regret to inform that as of 1st April 2024, NUH Cytogenetic Laboratory will discontinue microdeletion FISH testing for DiGeorge syndrome. Consequently, the option for LSI TUPLE1 (HIRA)/LSI ARSA [22q11/22q13], specifically for DiGeorge syndrome, will be removed from the probe list.

We recommend the alternative test available at KK Women's and Children's Hospital. For further inquiries regarding testing information, please contact Ms. Ng Siew Lan or Ms. Puvaneswary Kandiban at 67724912.

For further queries, please contact Ms Chua Sok Peng at 6772 2512.

Yours sincerely,

Dr Lee Shir Ying
Head of Haematology/Cytogenetics
Senior Consultant, MBBS, FRCPath
Department of Lab Medicine
National University Hospital
